

# Visualisation and Analysis of Geographic Information

Algorithms and Data Structures

João Valença  
valenca@student.dei.uc.pt

Department of Informatics Engineering  
University of Coimbra

February 2, 2015

# Motivation

- ▶ To develop a Web application for Geographic information system
- ▶ A QREN project with Smartgeo and UC

# Motivation

- ▶ Reduce visual information when displaying large numbers of geographic points (e.g. Points of interest)
- ▶ Find a representative subset of a collection of points in a map

- ▶ The set of points is dynamic

# Coverage

## ► Minimising Coverage

# Coverage

## ► Minimising Coverage

$$\min_{\substack{P \subseteq N \\ |P|=k}} \max_{n \in N} \min_{p \in P} \|p - n\|$$

# Work Plan

- ▶ 1<sup>st</sup> Semester
  - ▶ Literature Review: Geographic Information Systems, OGC Standards WMS, WFS, Map Projections, algorithms and heuristics for clustering and facility-location problems.
  - ▶ Development of a Branch-and-Bound approach.
- ▶ 2<sup>nd</sup> Semester
  - ▶ Development of heuristic approaches.
  - ▶ Experimental analysis of the algorithms.
  - ▶ Integration of the algorithms in the visualisation framework through web-mapping standards (WMS/WFS).
  - ▶ Comparison between different approaches using Open Street Map data.

# Integer Linear Programming

$$\begin{array}{ll}\text{minimise} & D \\ \text{subject to} & \sum_{j=1}^N y_j = k \\ & \sum_{j=1}^N x_{ij} = 1 \quad i = 1, \dots, N \\ & \sum_{j=1}^N d_{ij} x_{ij} \leq D \quad i = 1, \dots, N \\ & x_{ij} \leq y_j \quad i = 1, \dots, N; j = 1, \dots, N \\ & x_{ij}, y_j \in \{0, 1\} \quad i = 1, \dots, N; j = 1, \dots, N\end{array}$$

# Branch-and-bound

- ▶ Branching
  - ▶ Divide search space in a binary tree
  - ▶ At each step, decide if a point is a centroid or non-centroid
  - ▶ Update objective function accordingly

# Branch-and-bound

- ▶ Branching
  - ▶ Divide search space in a binary tree
  - ▶ At each step, decide if a point is a centroid or non-centroid
  - ▶ Update objective function accordingly
- ▶ Bound
  - ▶ Assume best possible case
  - ▶ Prune tree

# Branch-and-bound

- ▶ Inserting a Centroid
  - ▶ Search all non-centroids for assignment update
  - ▶ Smaller or equal coverage value

# Branch-and-bound

- ▶ Inserting a Non-centroid
  - ▶ Search for closest centroid
  - ▶ Larger or equal coverage value

# Branch-and-bound

- ▶ Removing a Centroid
  - ▶ Update all non-centroids
  - ▶ Larger or equal coverage value

# Branch-and-bound

- ▶ Removing a Non-centroid
  - ▶ Update objective function
  - ▶ Smaller or equal coverage value

# Branch-and-bound

- Applying the bound

# Branch-and-bound

- Applying the bound

- (Only if a better solution has been found)

# Geometric Approach

- ▶ Unnecessary number of calculations
  - ▶ Use geometric structures to speed-up the update of the objective function

# Geometric Approach

- ▶ Unnecessary number of calculations
  - ▶ Use geometric structures to speed-up the update of the objective function
  - ▶ Delaunay triangulations

## Geometric Approach

- ▶ Greedy Routing

# Geometric Approach

- ▶ Greedy Routing
- ▶ Use Hilbert curves to minimise distance between consecutive routing calls

# Geometric Approach

- ▶ Pre-process:
  - ▶ Initialize Delaunay Triangulation
  - ▶ Sort points by Hilbert curve

# Geometric Approach

- ▶ Inserting a Centroid
  - ▶ Insert centroid in triangulation
  - ▶ Search all non-centroids for assignment update
  - ▶ Smaller or equal coverage value

# Geometric Approach

- ▶ Inserting a Non-centroid
  - ▶ Search for closest centroid using greedy routing
  - ▶ Update objective function
  - ▶ Larger or equal coverage value

# Geometric Approach

- ▶ Removing a Centroid
  - ▶ Revert assignment
  - ▶ Remove centroid from triangulation
  - ▶ Larger or equal coverage value

# Geometric Approach

- ▶ Removing a Non-centroid
  - ▶ Update objective function
  - ▶ Revert assignment
  - ▶ Smaller or equal coverage value

# Algorithm Comparison

## ► Complexity of operations

Algorithm	Insert		Remove	
	Centroid	Non-Centroid	Centroid	Non-Centroid
Naïve BB	$\Theta(N)$	$\Theta(K)$	$\Theta(N)$	$\mathcal{O}(1)$
Geometric BB Average Case <sup>1</sup>	$\mathcal{O}(\log K + N/K)$	$\mathcal{O}(\sqrt{K})$	$\mathcal{O}(N/K)$	$\mathcal{O}(1)$
Geometric BB Worst Case	$\mathcal{O}(K + N)$	$\mathcal{O}(K)$	$\mathcal{O}(N)$	$\mathcal{O}(1)$

---

<sup>1</sup>to be shown

# Algorithm Comparison

- ▶ Tests Performed
  - ▶ Effect of N
    - ▶ Change N
    - ▶ Keep proportional K
  - ▶ Effect of K
    - ▶ Fixed N
    - ▶ Change K

# Algorithm Comparison

Effect of  $N$

(a)  $K = 0.25N$

(b)  $K = 0.5N$

(c)  $K = 0.75N$

● – Integer Linear Programming    ▲ – Delaunay Assisted B&B    ■ – Naive B&B

# Algorithm Comparison

## Effect of $K$

(a)  $N = 10$

(b)  $N = 20$

(c)  $N = 30$

(d)  $N = 40$

● – Integer Linear Programming ▲ – Delaunay Assisted B&B ■ – Naive B&B

# Future Work

- ▶ Heuristic Approach
- ▶ Approximation Algorithms
- ▶ Adapt to allow panning and zooming
- ▶ Integration with WFS standard
- ▶ Benchmark with real data
